

DUSTIN JONES

Denver, CO

DBJ2297@gmail.com | linkedin.com/in/dustinj15 | github.com/dustinJ15 | dustinJ15.github.io

EDUCATION

Metropolitan State University of Denver

Denver, CO

B.S. Computer Science | Minor: Mathematics

Expected Dec 2027

- GPA: 4.0 / 4.0 | Relevant Coursework: Data Structures & Algorithms, Discrete Structures, Computer Organization, Operating Systems, Computer Networks, ARM Assembly

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C, C++, Java, HTML/CSS

Frameworks & Libraries: Flask, Django, pytest, Playwright, NumPy, Pandas, openpyxl

Tools & Concepts: Docker, Git, Linux, GitHub Actions, CI/CD (continuous integration and delivery), TDD (test-driven development), ETL Pipelines, REST APIs, Relational Databases

SOFTWARE ENGINEERING EXPERIENCE

Frontage Laboratories

Exton, PA

Software Engineering Intern

Jun 2026 – Aug 2026

- Replaced a manual Excel quoting process that took specialists about a day and a half per quote with a Flask web application: client intake links, a json-logic rules engine, six-role access control, change orders, and generated Excel/PDF deliverables.
- Shipped it behind a one-command CI gate (pytest, flake8, mypy, bandit) and a Mergify merge queue, with 1,500+ automated tests including Playwright browser coverage. 537 commits and 155 merged PRs in eight weeks.
- Owned the full stack through production (nginx, application server, Flask app and database), porting the application to Linux and standing up the production server single-handed in the final week after a hosting platform change.
- Authored and executed the 21 CFR Part 11 computer-system validation package for a second tool: validation plan, user requirements, risk assessment and mitigation, test scripts, incident log, and release memo.
- Built two zero-install offline tools coworkers run by double-clicking one HTML file: a barcode and aliquot label generator, and a billing analytics dashboard. Both read and write Excel and Word via their document XML.
- Awarded a performance bonus; offered an ongoing consulting engagement and a full-time position at the close of the internship.

MSU Denver Honors Program

Denver, CO

Honors Program Student Assistant

Jan 2026 – Present

- Built a re-runnable Python pipeline turning a three-sheet, 349-row contact list into a verified workbook of 182 institutions: batched verification against each live site, immutable per-run results merged highest-confidence-wins, a blind re-check audit wave, and a QA gate the deliverable cannot build without.

Ember Capital Partners

Denver, CO

Software Engineering Intern | github.com/dustinJ15/rental-pipeline-public

Nov 2025 – Mar 2026

- Engineered a Dockerized Python ETL pipeline normalizing 4 report types across 4 property management systems (Yardi, ResMan, Entrata, RealPage), with 16 parsers handling HTML-disguised XLS, merged-cell headers, and embedded status blocks into unified schemas for BI dashboards.
- Implemented production reliability features: file fingerprinting, configurable row-count validation, per-run ingestion logging, and unit matching against a master property index with 96–99% match rates.

TECHNICAL PROJECTS

Agentic Development Workflow | Claude Code, Bash, Git, GitHub Actions

- Designed and published a spec-driven workflow for AI-assisted development (design interview, spec, tickets, then a supervised implementation loop) plus the verification gate that makes machine-written code auditable before it can merge.

LEADERSHIP & ACTIVITIES

Ski Instructor, Vail Resorts · Hang Gliding Instructor · Zipline Guide

2020 – 2025

- Trained and led clients through technical, high-stakes environments, developing the communication and composure under pressure that carries directly into team-based engineering work.

Eagle Scout, Boy Scouts of America
